

Notice of Acquisition of "Digital Transformation Certification" as stipulated by METI

We are pleased to announce that on March 1, 2026, we were certified as a "DX Certified Business Operator" under the DX Certification System stipulated by METI.

This system was implemented in May 2020 and recognizes companies whose efforts, including their mid-term management plans, business strategies and systems for promoting DX, meet the certification criteria based on METI's DX Promotion Indicators, as well as their appropriate disclosure of information to stakeholders.

Our group is working to create an environment that utilizes information processing technology to enhance corporate value through DX and aims to realize DX by promoting the following measures.

- **Achieving value creation and efficiency throughout the value chain by building and utilizing an integrated data infrastructure.**
Integrate business data that was previously dispersed across departments, from order specifications to maintenance, and establish an integrated data infrastructure that visualizes information and can be used by anyone.
- **Improve business processes in all departments by improving DX skills**
Implement DX education to encourage employees to make voluntary improvements to their work, and promote efforts to develop human resources, improve the work environment, and utilize data company-wide.
- **Building a digital infrastructure for servitization businesses**
Develop and deploy sales support tools and product information sharing tools to accelerate courteous customer responses and increase value.
- **Data-driven management innovation**
To achieve fast and accurate decision-making that does not rely on experience or intuition, management information is aggregated on an integrated data infrastructure and visualize it through dashboards.

■ **Implementing human capital management**

(creating a work environment that fosters job satisfaction and personal growth)

Through the challenge and learning of DX, we simultaneously achieve the growth of personnel capable of responding swiftly to change and the strengthening of organizational capabilities.

We will continue to provide customers with new value throughout the entire product lifecycle by creating innovative solutions and enhancing business processes using digital technology. By further accelerating these efforts, we will further promote digital transformation.
